I Have a Škoda

### Your Škoda deserves only a Genuine Škoda Clutch

As an owner of Škoda, you're probably familiar with excellent drives. But do you know how a Clutch contributes to your drive? The clutch controls acceleration, when pulling away from a complete stop or when pulling away from a complete stop or when driving at lower speed, minimizing the chances of stalling the engine.

Clutches may be worn out for a number of reasons, from improper usage to wear and tear. To get the best from your drive, it is essential that your clutch remains in perfect condition.

In keeping with our commitment toward the benefits of our customers, we have introduced a campaign for various clutch packages for **Škoda Octavia** and **Škoda Laura** cars for a limited period only.

We invite you to avail this opportunity to maintain performance of your car at the authorized Škoda service centers from 15th February 2010 to 15th April 2010.

[Contact your dealership](#) for an appointment.

### Clutch Care Tips

- Do not rest your foot on the clutch pedal
- Excess revving of the engine before engaging the clutch may damage the clutch
- Do not drive unnecessarily at too high or too low engine revolutions
