AUTO GEAR SHIFT

The revolutionary Auto Gear Shift technology is something that everyone can drive around with much ease. That too, without having to change gears and press the clutch pedal.. It has an inbuilt clutch but without a pedal. The technology is based on an electronic control unit which drives the precision hydraulic actuator to control the clutch engagement and the gear shifting. Also, it ensures the gear and clutch operations happen at optimal timings. This gives you the ease of driving an automatic with the fuel efficiency of a manual transmission.
