

**Your connected friend
on the go.**

Enjoy a special bond with your car.

Artificial Intelligence through Voice Assistance.

Your voice is our command. With the voice controlled AI technology, you will have an enhanced driving experience.

Now your Hyundai car will be more than just a utility. Because it will now be equipped with Blue Link, a platform that enables an easy flow of critical information between you and your car. It is an Artificial Intelligence based technology, with inbuilt SIM card and a 24x7 call centre that enhances your safety, security and convenience. It can perform a range of functions with ease. In short, Blue Link is designed to enhance the connected driving experience.

VAD (Voice Assist Dialling)

This AI based feature provides Voice Assistance for the simple tasks you would like your car to perform. For instance, calling a number or a name, e.g. "Please call" / "I want to call Rahul".

Vehicle Navigation Control

Simply ask your car to search and locate your Point of Interest (POI). Be it a petrol pump, bank or restaurant, you will get an AI enabled Voice Response to guide you there with real-time traffic information.

Interactive Voice Recognition

A unique voice identification feature that recognises your voice to provide you with information on date, time and weather. It comes with NLU (Natural Language Understanding), which allows you to talk naturally without requiring the use of any specific commands.

Convenience at your fingertips.

Blue Link allows you to fully access/control certain features of your car from any distance with your mobile phone.

Remote Engine Start/Stop & Climate Control*

Start/stop your car from anywhere and set the desired temperature of FATC (Fully Automatic Temperature Control) along with the duration you want to keep it on for.

Remote Door Lock/Unlock

Now lock/unlock your car from anywhere, just by using Blue Link.

Remote Horn & Light Control

You can spot your car by using Blue Link to flash the headlamps and blow the horn for 30 seconds.

Find My Car location

You can also use Blue Link to locate your car on maps.

Share My Car (App sharing)

Share partial Blue Link services like POI (Point of Interest), send destination to car, alerts, etc. with 5 people.

Share the Destination (from device)

Share your destination with your friends by sending an SMS with a destination link.

Real-Time Vehicle Tracking

This can help you see the live location of your car and make sure your near and dear ones are safe.

Schedule linked Destination Setting

Keep track of your upcoming events and push event destinations to your car by syncing your smart phone calendar and destination.

Push Maps from App

Use Blue Link to search for a destination and send it to your car remotely. The feature can also be used by 5 other registered users to send the destinations. POIs are updated every 15 days.

Real-Time Point of Interest Search

Search for the nearest service dealer, petrol pump, restaurant, cafe, mall, hospitals, etc. en-route by using the app on your AVNT screen.

Push Maps by Call Centre

The Blue Link button on the inside rear view mirror allows you to find your location and get the destination on your AVNT screen.

Real-Time Traffic Information

Get real-time traffic updates on your AVNT screen that are easy, user-friendly and helpful in keeping you from getting stuck in traffic.

Round-the-clock security for your car.

No matter how much you love your car, you can't be with it 24X7. So, Blue Link protects your Hyundai car in your absence. And if anybody mishandles your Hyundai, it'll immediately alert you so that you can take necessary actions.

Stolen Vehicle Tracking & Immobilisation

Stolen Vehicle Tracking feature makes it difficult for thieves to steal your car. If anyone tries to steal your car, you will immediately get a notification informing you about an unauthorised entry, which you can report to the police. The call centre will assist the police to find your car by tracking it and immobilising it as soon as it stops.

Geo-fence Alert

With Blue Link, you can set a digital perimeter for your car. If the perimeter is violated, you will be alerted at regular intervals.

Speed Alert

While you know the dangers of overspeeding, others using your car might not. So, Blue Link helps you set a speed limit, which, if exceeded, will alert you at regular intervals.

Valet Alert

Monitor your car and ensure it's not taken for a ride when you hand it to the valet. Use the Valet Alert feature to set the driving boundary, speed and idling time limits. If any of these limit is breached, you will be alerted immediately.

Time Fencing Alert

Now you will be notified if your vehicle is moved within the restricted time frame with the Time Fencing Alert feature.

Idle Alert

With the Idle Alert feature, you will receive a notification on your mobile if your engine is left turned on for more than the set time limit.

Ensure proper health of your car.

Vehicle health and maintenance are crucial to ensure you have a smooth experience on the road. So, Blue Link gives you a range of proactive alerts on maintenance to keep your car at its best.

Auto & Manual DTC check

Precaution is better than cure. The saying holds good for the health of your car too. So, Blue Link is designed to pre-empt any issues with your car. If it suspects one, the indicator lights will be turned ON and the system will perform an Auto DTC (Diagnostic Trouble Codes) check and inform you. Manual DTC check can also be done by selecting Vehicle Diagnostics on the AVNT screen.

Monthly Health Report

Now track the health of your car with the monthly health report available on Blue Link. It shows the number of engine starts, distance travelled, drive time, max./avg. speeds, system health, etc.

Driving Behaviour / Information

The performance of your car depends on your driving habits. So, Blue Link gives you a trip analysis that allows you to see the effects of your driving on your car by showing you the total distance travelled, max./avg. speeds, hard braking, rapid acceleration etc. for every trip.

Your safety is our priority.

A Hyundai car is not just beautiful but safe too. Because it is equipped with intuitive technology that helps you in case of any emergency.

Auto Crash Notification

Hope for the best but be prepared for the worst. So, in case of an accident, you can instantly notify our call centre to send you appropriate and immediate help. Your emergency contacts (up to 5 people) will also be immediately notified via SMS, with your GPS location.

SOS / Emergency Assistance

Your safety is our top priority. And to ensure that you aren't alone in any grave situation, we have provided an SOS button (1st from left) on the inside rear view mirror. On pressing it, the call centre will contact your car and send you immediate help or medical assistance.

RSA (Road Side Assistance)

Now you will not be left stranded due to a car breakdown in a deserted place. The RSA button (middle button) on the inside rear view mirror will help you notify the call centre, which will immediately get in touch with you and dispatch urgent assistance, after getting your details.

Panic Notification

Now you don't need to panic when you are in a challenging situation. Because the FOB key now comes with a panic notification button (4th button). Just press it and if you are within the FOB operational range of your car, an SMS will be sent to your 5 pre-saved emergency contacts. Your car will also start to honk and blink immediately.
