

## Instructions for Collinite 845 Car Wax

**The premium carnauba car wax of America now in India. There is nothing better. Clear Coat Safe.**

- 1 Bottle (473.2 ml) gives at least 10 applications on a mid-size car like Honda City.
- Collinite 845 Provides excellent protection and lasts easily for 4 months. Easy to use, amazing shine, water beading, water sheeting (if 3 coats applied), UV protection, remove minor scratches, protects car paint and car surface from rust and acid rain.
- Shake the 845 bottle for 1 minute before applying. In warmer months apply in a shade to the car.
- Always apply No.845 Insulator Wax to a clean surface. If the surface is soiled or deteriorated, please clean the car thoroughly with car shampoo in shade.
- The 845 wax spreads so much **easier** and **uniformly** than other hard wax products available in market. After applying must let it sit for at least 15 minutes and let it haze & dry. Once wax is dry on car, will look like white powder. Now use a microfiber cloth supplied with wax to rub slowly & shine the car.
- If possible 15 minutes after first application, apply again on top, bonnet & trunk of the car, these are the area which get maximum rain & sun shine, so double coat is recommended. The sections of a car that will rust the quickest are around the wheel wells, so be sure that these are also protected by collinite 845 wax.
- **Kit Contains:** one 473.2 ml (1 Pint) Collinite 845 Wax, one Micro fiber Cloth & one small bottle of 845 sample.

### You Will Need

- A bottle of 845 Collinite car wax (supplied)
- One clean cotton cloth
- One micro fiber cloth (supplied)
- Household cleaner
- Car Shampoo

### Step 1: Clean your car thoroughly (very important):

Clean your car in a car wash or by hand with a car shampoo, rinse with water & dry the car completely.

### Step 2: Park in shade:

Park your clean, dry car in a shaded area and allow it to cool down.

**Step 3: Shake wax & apply to clean cotton cloth:**

Shake the liquid wax container well for 1 minute, **The cap on the bottle is child proof, so hold the bottle in left hand and with right hand push the cap down & twist as shown on cap.** Apply a small amount to a clean cotton cloth.

**Step 4: Apply wax:**

Starting with the roof, apply the wax in small, circular motions. The goal is to apply as thin layer of wax as possible.

**Step 5: Continue rubbing sections:**

Continue rubbing in sections, moving to the hood, the trunk, and finally the sides of the car.

**Step 6: Allow wax to dry for 15 minutes:**

Allow the wax to dry to a dull finish, will look like white powder.

**Step 7: Remove dry wax:**

Using the supplied yellow micro fiber towel, remove the dry wax in reverse circular motions, again going from the highest point of the car to the lowest.

**Step 8: Remove stray waxy residue:**

Spray household cleaner on matte, unpainted surfaces, like a plastic bumper, and wipe with a clean cotton cloth to remove any stray waxy residue.

**Step 9: Buff car surface:**

Buff the car's surface one last time, using the microfiber towel. Then stand back and admire your reflection!
