FREELANDER 2

FREELANDER 2 - 2.2D

Freelander 2 sets new standards for compact, premium 4x4s with class-leading breadth of capability: agile and responsive on-road and outstanding off-road.

Breadth of Capability - Terrain Response®

Using any one of the four different settings, the unique Terrain Response® system maximises traction across a range of different surfaces through the vehicle's electronic management systems and traction aids. This optimises driveability and comfort and is like having a Land Rover expert sitting beside you on every journey.

Transverse Engine

The engine in Freelander 2 is mounted transversely which gives more room to provide excellent crash protection, more flexibility in front end styling and allows shorter bonnet, giving more room in the cabin.

Dynamic Technology Systems

All Dynamic Technology Systems are standard on Freelander 2 comprising of Anti-Lock Braking System, Cornering Brake Control, Dynamic Stability Control, Electronic Brake Force Distribution, Electronic Traction Control, Emergency Brake Assist, Hill Descent Control and Roll Stability Control.

Space to sit back and relax

Inside Freelander 2, both the driver and passengers enjoy the benefits of generous leg, head and shoulder room. Everyone can enjoy the view with stadium seating, putting rear passengers 50mm higher than those in front.
